

Linking Whzan and PCS

Connecting Two Systems

Overview

Whzan is now integrated with Person Centred Software, this means that readings taken using the Whzan system will automatically transfer into the PCS system. This will save precious time used adding the readings in PCS manually.

Setting Up the API Key

This short guide will cover the steps to get this integration set up for your care home.

1. To start the process, first contact PCS specifying that they want to enable a link to Whzan (Note that PCS will charge a subscription fee for this service). PCS will provide an API key.
2. Next email support@whzan.com with your API key and the names of the home's caseloads on the Whzan system.
3. The Whzan team will then activate the link to PCS and inform you when this has been completed

Importing from Nourish to Whzan

Once the link has been made your resident's Whzan result will automatically flow into PCS.

Please make sure that the resident's information on Whzan match their information on PCS, this includes their NHS number.

If you are setting up a new caseload on Whzan then you will be able to import your resident's information straight into Whzan.

If you need any assistance in your set up then please contact our support team on **01983817000** or our support email at **Support@whzan.com**
